DATE MAILED: 10/01/2003				

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/059,765	HIRATA, SHINICHI	
	Examiner	Art Unit	
	James Seal	2131	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 13 June 2003.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1,3-9,11 and 12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1,3-9,11 and 12 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) The proposed drawing correction filed on _____ is: a) approved b) disapproved by the Examiner.
 If approved, corrected drawings are required in reply to this Office action.
- 12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
 a) The translation of the foreign language provisional application has been received.
- 15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

1. The request filed 13 June 2003 for a request for Continued Examination (RCE) under 35 CFR 132 based on parent Application 09/059765 is acceptable and an RCE has been established. An Action on the RCE follows.
2. Amended claims 1, 5, 8, and 9 have been entered.
3. Claims 1, 3-9, and 11-12 are pending.

Specification

4. The title of the invention is not descriptive. The present title "Transmitting/Receiving Apparatus and a Transmitting/Receiving method" gives no indication of what the applicant's believes is his convention. A new title is required that is clearly indicative of the invention to which the claims are directed. Examiner suggests "Remote Control of VCR With Electronic Mail"

Drawings

5. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance. Figure 1 depicts a classical network layout, with Internet, providers and users. Examiner would suggest the use of labels such as "Remote Users" and "Controlled Appliances" to differentiate this figure from a classical network layout.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1, 3-9, 11-12 rejected under 35 U.S.C. 103(a) as being unpatentable over Naughton (US6020881 A) and further in view of Venkatraman US 5956487, A Bob Brown and Wayne Eckerson Users Demanding Help in Managing Big E-mail Nets, Dave Brambert and Patricia Networld Bo0ston (Upgrade was the Watchword at the Skit-studded Expo), Schneier E-mail Security How to Keep Your Electronic Messages Private) and Rohatgi et. al. US 5625693 A.

7. As per claim 1, the limitation of a reception device (apparatus) for controlling for controlling a video recording device is disclosed by Naughton Figure 1a element 39 is a VCR or video cassette recorder (Column 8, line 53). Naughton shows 39 being remotely controlled via the Internet (element 160 and Column 1, lines 11-14) by the user using a hand held device (element 170). Naughton is silent on what interface is used to port the Internet communication signal into the house and whether that is directly connected to the interface device or whether the remote controlled device is physical separate from the interface device.

8. Venkatraman teaches (see Figure 5), both cases, that is the case where the interface (element 102) is physical separated from the Internet (100) and the case

where the remotely controlled device is directly interfaced with the Internet device 10 and 100. One of ordinary skill in the art at the time that the invention were made would have motivated to have separated the remotely controlled device from the Internet interface because a house with several members would be provided with more access for programming from a number of house members or it would enable communication among a set of devices (Column 5, lines 31-35; 43-44).

9. Naughton and Venkatraman are both silent on the limitation that the control code is sent by email. Naughton teaches sending control codes to operate remote control devices over the communication network (Figure 21c, element 160), but is silent on what means (that is the transport protocol) is to be employed to do this (see Figure 24 element 129). Brambert et. al. teach the use of sending control commands via e-mail to operate a Fast 5000 AutoLoader tape remotely jukebox style (page 2, next to last paragraph) "so user can send requests to the [remote] unit via e-mail". Brown et. al. teach that transport of commands between application over a network will become of "strategic importance" as mainframes are downsized. "E-mail is expected to be used increasingly to carry strategic business information and to transport commands between application" (page 1, 4th paragraph). Thus one of ordinary skill in the art at the time of the invention was made, to provide for "some" means to transport commands across a network as disclosed by Naughton, would have been motivated to implement Brambert use of e-mail to transport control commands to operate devices (a tape autoloader in jukebox style) remotely over a network because as Brown point out with the businesses

downsizing of mainframes, email nets will become increasingly important means to transport commands and to operate over a distributed system.

10. The limitation that the control codes are extracted (that is unpacked) from the transport protocol once they arrive at the site of the remote device is taught by Naughton (Column 28, 45-49) from the message and are then used to control remotely appliances, such as, TV or VCR or microwave oven or stereo, or thermostat (Column 7, 16-20, Figure 1b) is disclosed by Naughton. Further, the limitation that the remote controller has the means to store control commands (Figure 1c is a block diagram of the remote control device with memory). That the user may schedule programs to be recorded is disclosed by Naughton (Column 13, 4-7) and that corresponding schedules and scheduling, as shown in Figure 2c, are stored in Figure 1c 303. The examiner takes official notice that home VCR's have timers. Thus it would have been obvious for one of ordinary skill of the art at the time of the invention to have designed into the user's unit a means of using the Program Listing (element 71 Figure 2c) and to set the timer on the VCR (element 75) to record a program which was aired on Television (element 73) because users would then be allowed to record special events programs remotely.

11. The combination of Naughton/Venkatraman/Bramber/Brown are silent with regards to the limitation of encrypted certificates as a means for validating the sender before the stored control code is execute. Schneier teaches (E-mail Security and How to Keep Your Electronic Message Private), need to validate the sender of the email (pages 3-5). Rohatgi teaches the security for executable application by decrypting of

an encrypted certificate (Abstract, Column 9, line 20-25; Column 11, lines 6-7) and validating whether the executable code was indeed sent by an authorized user.

Therefore one of ordinary skill in the art would have been motivated to add some type of verification to the combination of Naughton/Venkatraman/Bramber/Brown system validating the user before executing the control codes to prevent terrorist, hackers, pranksters, etc. from intentional or unintentional modification. It would be inherent that the control commands would stay in storage until the validation of the sender were completed and that control code is executable. Claim 1 is rejected

12. Claim 2 canceled.

13. As per claim 3, the limitation that certification information is predetermined text information in an encrypted state is disclosed by Rohatgi (Column 9, lines 10-13).

Claim 3 is rejected.

14. As per claim 4, the further limitation of using a secret key for the encryption is disclosed by Rohatgi (Column 5, lines 33-35). Claim 4 is rejected.

15. Claim 5 is a methods claim for device claim 1 and is rejected in view of the same prior art of record.

16. Claim 6 applicant recites a transmitting device that is the complement of the receiving device of claim 1 and is rejected in view of the same prior art of record.

17. Claim 7 recites a method of transmitting that is disclosed in device claim 6 and is rejected in view of the same prior art of record.

18. Claim 8 is a transmission/reception system encompassing device claims 1 and 5 and is rejected in view of the same prior art of record.

19. Claim 9 is a method for carrying out the transmission/reception system of claim 8 and is rejected in view of the same prior art of record.
20. Claim 10 is canceled.
21. As per claim 11, the limitations of a terminal consisting of a modem for receiving electronic mail through a network, a memory, a CPU decrypting, extracting executing control commands and authentication is disclosed by Naughton (see Figure 1c, elements 401, 403, 404 and 405). Claim 11 is rejected.
22. As per claim 12, the limitation of a terminal with a display device using a GUI (graphical user interface) display is disclosed in Naughton (Figure 1b). Claim 12 is rejected.

Response to Arguments

23. Arguments are moot in view of the amended claims and new art rejections.

Art Referenced by Not Applied

24. The Japanese patent JP 10-063724 filed 16 August 1996 (English translation via the Japanese Patent Office) entitled Building Management System Provided With Interface With Electronic Mail, discloses a method of remote control in which equipment such as air conditioners, lights, temperature control is controlled through electronic mails without requiring an operator (Abstract and Means).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Seal whose telephone number is 703 308 4562. The examiner can normally be reached on M-F, 8-5.

Art Unit: 2131

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gail Hayes can be reached on 703 305 9711. The fax phone numbers for the organization where this application or proceeding is assigned are 703 746 7239 for regular communications and 703 746 7240 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703 308

3900.
